

Alessandro Rossi

Full Stack Developer & DevOps Engineer

Rome, Italy | (+39) 3887788362 | alessandro0024@gmail.com
[Portfolio](#) | [LinkedIn](#)

Professional Summary

Full Stack and DevOps developer with 5+ years of experience building and modernising enterprise integration platforms, backend APIs and cloud infrastructure. I work on the integration backbone of a global vehicle-leasing group, which serves hundreds of thousands of requests a day to internal applications and third-party partners. My work spans the full lifecycle, from gathering requirements with the client through architecture, implementation, deployment and monitoring, with a focus on Azure, .NET, containerised microservices and API governance. Native Italian and Spanish speaker with C1-level English, and a strong interest in clean architecture and DevOps practices.

Work Experience

.NET Backend Developer & Infrastructure Specialist

[Interlogica](#) | Rome, Italy · Client: **Ayvens** (formerly ALD Automotive, Société Générale group) March 2022 – Present

Ayvens is one of the world's largest vehicle-leasing and fleet-management groups. Its integration platform is the backbone connecting leasing contracts, fleet telematics, pricing, invoicing, driver management and dealer integrations, and it serves hundreds of thousands of requests a day to internal applications and external partners. I work on that platform as part of the team that maintains and modernises it, operating independently without direct supervision, reporting to the project manager and in regular contact with the client.

- **Platform Development:** Build and maintain the integration code that bridges the data and business layers across Oracle and SQL Server, keeping leasing, telematics, pricing, invoicing and dealer systems in sync at production scale
- **BizTalk 2013 to 2020 Migration (2024–2025):** Led the upgrade of the integration estate and designed a parallel-run harness to de-risk it. The harness mirrored every request to both versions and compared the output byte for byte, validating tens of thousands of real production requests over two months and catching dozens of defects introduced by the new JSON pipeline before release
- **API Gateway:** Helped design and ship an Azure API Management gateway that now fronts all external partner traffic, with OAuth2/JWT authentication, rate limiting and IP restrictions, deployed through infrastructure as code and Azure Pipelines
- **Microservices Modernisation:** Decomposing the monolithic platform into .NET 10 microservices ahead of BizTalk's end of life, defining service boundaries, contracts and migration sequencing
- **AI & RAG:** Contributed to *proxyppt*, an internal retrieval-augmented-generation assistant over company documentation
- **Database Management:** Administer and tune Oracle and SQL Server instances supporting the platform, covering schema design, query performance, data integrity and backup strategy
- **Infrastructure & Observability:** Containerised deployments with Docker and Docker Compose for consistent environments across development, staging and production, plus centralised log aggregation, application performance monitoring and security auditing with Elasticsearch and Kibana
- **Functional Analysis:** Gather and document requirements with the client and translate them into clear technical specifications

Key Technologies: C#, .NET 10, ASP.NET Core, Entity Framework, Microservices, BizTalk Server 2013/2020, Azure API Management, Azure Pipelines, Docker, Docker Compose, Oracle, MS SQL Server, Elasticsearch, Kibana

Salesforce Full Stack Developer

[Deloitte Italia](#) | Rome, Italy July 2021 – March 2022

- **Portal Development:** Architected and implemented a new administrative portal module enabling customer admins to create, edit and manage users with granular permission controls
- **Identity Management:** Integrated external identity and access management (C-IAM) services, implementing secure authentication and authorization flows
- **Agile Methodologies:** Collaborated in agile sprints using Jira, delivering features across both Waterfall and Agile project phases with rigorous code review and quality assurance processes
- **Quality Assurance:** Authored and maintained comprehensive unit tests, conducted code reviews and performed benchmarking to ensure production-ready code quality

Key Technologies: Salesforce, Apex, JavaScript, HTML/CSS, C-IAM, Agile, Jira, Unit Testing

Technical Skills

Cloud & Azure

Azure API Management (OAuth2/JWT, policies, rate limiting, IP restrictions), Azure Pipelines & infrastructure as code, Azure Virtual Machines, resource management and RBAC

Backend & Full Stack Development

Languages: C#, Java, Rust, TypeScript/JavaScript, C++, C, Bash, SQL

Frameworks & Libraries: .NET 10 / .NET Core, ASP.NET Core, Entity Framework, Actix-Web, React, Angular, Node.js

Architectural Patterns: RESTful APIs, Microservices, Event-driven & message-based integration, Design Patterns, Domain-Driven Design

Testing & Quality: TDD, Unit Testing (xUnit, Jest), parallel-run regression harnesses, code review best practices

Integration & AI

Integration: BizTalk Server 2013/2020, WSO2 API Manager, Azure API Management, message-based and event-driven integration

AI: Retrieval-augmented generation (RAG), embeddings & vector databases, semantic search

Infrastructure & DevOps

Containerisation: Docker, Docker Compose, Kubernetes, image management, Dockerfile optimisation

CI/CD: Azure Pipelines, infrastructure as code, automated deployment

Monitoring & Logging: Elasticsearch, Kibana, centralised log aggregation, application performance monitoring

Databases: MS SQL Server, Oracle, PostgreSQL, Entity Framework ORM

Frontend Development

Web Technologies: TypeScript, JavaScript (ES6+), HTML5, CSS3

UI Frameworks & Styling: React, Angular, Tailwind CSS, Bootstrap

Soft Skills

Agile & Scrum methodologies • Autonomous work and direct client contact • Cross-functional team collaboration • Code review and mentoring • Problem-solving and technical documentation • Multilingual communication (Italian and Spanish native, English C1)

Professional Development

Currently working towards the **Microsoft Certified: DevOps Engineer Expert** certification path (AZ-400), which covers the practices I apply day to day and want to formalise:

- CI/CD pipeline design with Azure Pipelines and GitHub Actions, including build, test and release automation
- Infrastructure as code and configuration management with Bicep, ARM templates and Terraform
- Source control strategy, branching models, pull request workflows and package and artifact management
- Deployment strategies such as blue-green, canary and feature flags, with automated rollback
- Secrets and compliance in the pipeline, using Azure Key Vault, dependency scanning and secure DevOps practices
- Observability and site reliability, using Azure Monitor, Application Insights and KQL for alerting and feedback loops

Education

Bachelor's Degree in Computer Science

Università degli Studi di Genova

October 2018 – September 2022

Field of Study: Information and Communication Technologies – Software Development and Analysis | EQF Level: 6 | Credits: 183 CFU

Relevant Coursework: Introduction to Programming & Data Structures • Algorithms and Complexity Analysis • Software Engineering (Design Patterns, UML, Refactoring) • High & Low Level System Design

Thesis: Software Testing Methodologies in Salesforce Enterprise Environments

Languages

Italian Native

Spanish Native

English C1 (Proficient) – Listening, Reading, Writing, Spoken Production & Interaction
